RouterBOARD SXT r2 2nD

Quick Setup Guide and Warranty Information

The RouterBOARD SXT r2 2nD comes as a complete set, and includes a built in 802.11b/g/n dual chain wireless device, and a dual polarization 16dBi antenna. It has one BASE-T 10/100 ethernet connector which supports MDI-X auto detection.

First use

1. Connect an Ethernet cable to the port behind the small plastic door
2. The SXT accepts 24V Passive PoE from a PoE injector
3. The default IP address from LAN is 192.168.88.1 for configuration
4. Username is **admin** and there is no password

Powering

The board accepts powering from the Ethernet port (Passive PoE) 8-30V DC. Package contains a 24V adapter. Maximum power consumption of the device is 7W.
Booting process

Initial connection has to be done via the Ethernet cable. Open **192.168.88.1** in your web browser. Username is **admin** and there is no password. In case IP connection is not available, Winbox can be used to connect to the MAC address of the device. More information here: **http://wiki.mikrotik.com/wiki/First_time_startup**

In case you wish to boot the device from network, for example to use MikroTik Netinstall, hold the RESET button of the device when starting it until the LED light turns off, and Metal will start to look for Netinstall servers.

Mounting

With the clip pointed forward, slide the mounting bracket into the rail on the bottom of the case, until the clip clicks into place. The SXT comes bundled with a hose clamp - guide the clamp through the opening in the bracket and around the pole where it will be mounted. Tighten the hose clamp screw when alignment is complete. Two screw holes are provided as additional security against accidental bracket movement.

The SXT device has a sliding door, behind which the Ethernet port, and the reset jumpers are located. This door can be also secured shut with a screw in the provided screw hole.

Buttons and Jumpers

- RouterOS reset jumper hole (access through the plastic door) – resets RouterOS software to defaults. Must short circuit the metallic sides of the hole (with a screwdriver, for example) and boot the device. Hold screwdriver in place until RouterOS configuration is cleared.
- RouterBOOT reset button (access through the plastic door) has two functions:
  - ✓ Hold this button during boot time until LED light starts flashing,
    release the button to **reset RouterOS configuration** (same result as with reset hole)
  - ✓ Hold this button during boot time longer, until LED turns off,
    and then release it to make the device **look for Netinstall servers.**

Operating System Support

Currently tested operating system is MikroTik RouterOS (starting from version v5.20).

Federal Communication Commission Interference Statement (FCC ID: TV7SXT-2ND)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This device and its antenna must not be co-located or operation in conjunction with any other antenna or transmitter.

IMPORTANT: Exposure to Radio Frequency Radiation.

13 cm minimum distance has to be maintained between the antenna and the occupational user and 28 cm to general public. Under such configuration, the FCC radiation exposure limits set forth for an population/uncontrolled environment can be satisfied.

Antenna Installation. WARNING: It is installer's responsibility to ensure that when using the authorized antennas in the United States (or where FCC rules apply); only those antennas certified with the product are used. The use of any antenna other than those certified with the product is expressly forbidden in accordance to FCC rules CFR47 part 15.204. The installer should configure the output power level of antennas, according to country regulations and per antenna type. Professional installation is required of equipment with connectors to ensure compliance with health and safety issues.

CE Declaration of Conformity

Hereby MikroTik declares that this product is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. The Declaration of Conformity may be obtained by contacting sales@mikrotik.com.
